Tracking the PushData

Push_data
(Fingerprints from the machine)

API Listener

GetFingerPrints()

Store the fingerprints

DB

get the last 100 fingerprints

ERP
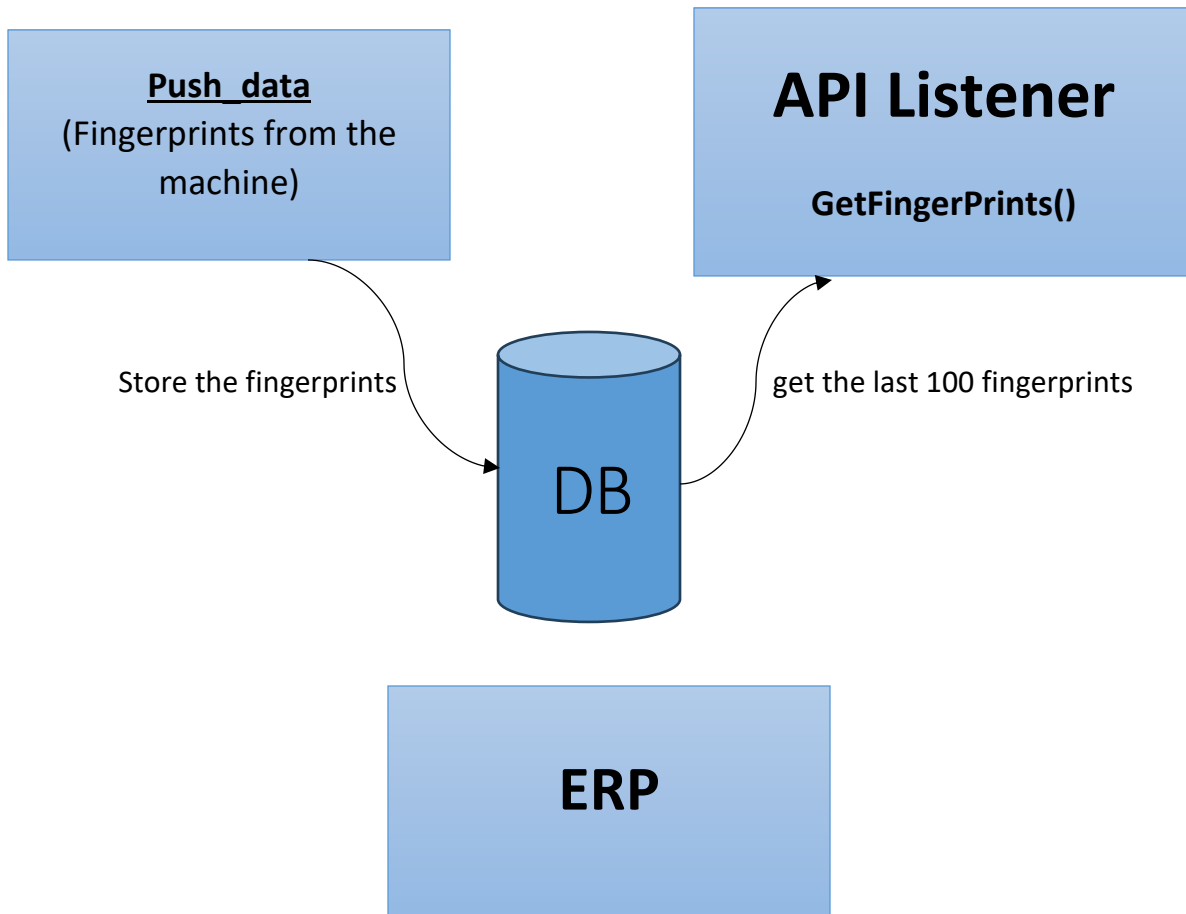

The PushData is stored in database. The API Listener module will get the last 100 records (fingerprints) from the database through the endpoint → GetFingerPrints() .

The ERP module will have a background job that calls the endpoint GetFingerPrints().

Then , saves data in the corresponding customer database through the machine serial number.
